Occupation	Self Employee	Annual Income	\$600,000.00
Insurance Type	Life	Coverage Amount	\$45,000.00

2. Risk Analysis & Premium Pricing

Predicted Risk Class	Class 1 of 8
Risk Category	Low Risk
Recommended Annual Premium	\$10,000.00

3. AI Actuarial Analysis

The recommended premium of **\$10,000** and **Risk Class 1** for this customer reflect an assessment of various personal and policy-specific factors.

Here's a breakdown:

Risk Class 1 (Preferred Low Risk):

The customer has been assigned to the most favorable risk class primarily due to a strong set of positive health and lifestyle indicators:

* **Excellent Health & Lifestyle:** The customer is a non-smoker, reports no alcohol consumption, engages in moderate exercise, and maintains a healthy BMI of 22.9. These factors significantly reduce the likelihood of health-related claims.

* **Favorable Medical History:** There is no adverse family history indicated, and no previous claims identified as negative.

* **Very Young Age:** While the age of 0.23 years (an infant) has unique actuarial considerations, the overall positive health profile strongly supports a low-risk assessment for long-term mortality.

Premium of \$10,000:

Despite qualifying for the lowest risk class, the premium is determined by several additional factors:

* **Coverage Amount:** The desired coverage amount of **\$45,000** is a direct driver of the premium.

* **Product Specifics ('D1'):** The chosen product, 'D1', likely includes a range of comprehensive benefits, specific riders, or investment components that contribute to a higher premium. For instance, policies designed for very young individuals can sometimes incorporate features like guaranteed future insurability, specific pediatric care riders, or savings components that increase the overall cost compared to a basic term life policy.

* **Administrative & Operational Costs:** A portion of every premium covers the insurer's operational expenses, claims processing, and regulatory requirements.

* **Income:** While not a direct risk factor for mortality, the customer's high income of \$600,000 may correlate with a choice for more comprehensive or higher-value policy features that drive up the premium.

In summary, the customer's excellent health and lifestyle indicators qualify them for the most favorable risk class. The **\$10,000** premium is primarily influenced by the chosen coverage amount and the specific features and comprehensive benefits associated with the 'D1' product.

4. Sign-off & Recommendation

Based on the predictive model output and AI underwriting guidelines, the premium recommendation is formally calculated at **\$10,000.00** per annum. The underwriting team should perform secondary manual verification if the risk class exceeds Class 5.
