

ActuaryGPT — Vehicle Claim Auditing Report

Confidential claim fraud analysis & risk recommendation report.

1. Policyholder & Claim Profile

Age / Months as Cust	35 yrs / 100 mos	Policy State / CSL	NY / 250/500
Incident Type	Single Vehicle Collision	Incident Severity	Minor Damage
Collision Type	Side Collision	Incident Date / Hour	N/A / 12:00
Total Claim Amount	Rs. 5,000.00	Vehicle Claim	Rs. 3,500.00
Auto Make & Model	Toyota Camry (2018)	Witnesses / Police Report	2 / NO

2. Claim Fraud Assessment

AI Fraud Classification	Low Risk - Verified Claim
Prediction Confidence	99.1%
Underwriting Recommendation	Approved for Claim Payout

3. AI Claim Analysis & Detail Explanation

Vehicle Claim Auditing Report

Claim ID: VEH-TEST-99

Client: ahan

Date: 2026-06-21

Machine Learning Classifier Output Summary:

* **Fraud Predicted:** N (Normal Claim)

* **Prediction Confidence:** 99.1%

Top Similar Historical Claims Summary:

* Claim VEH-960680: Similarity: 97.8%, Fraud Flag: N, Status: approved

* Claim VEH-464234: Similarity: 97.3%, Fraud Flag: N, Status: approved

* Claim VEH-884365: Similarity: 97.3%, Fraud Flag: N, Status: approved

1. Incident Risk Assessment

Positive Indicators:

- * The insured has a long tenure with the company (100 months) and a professional background (MD, professional occupation), typically associated with lower risk.
- * The incident occurred at a standard hour of the day (12 PM).
- * Two witnesses are reported, which can aid in verifying the incident details.
- * Authorities (Police) were contacted, indicating adherence to standard procedure for significant incidents.

Potential Concerns:

- * The incident is classified as 'Single Vehicle Collision' with 'Minor Damage', yet the total claim amount is \$5000.0, with a vehicle claim of \$3500.0 for a 2018 Toyota Camry. While possible, this is on the higher end for 'minor damage' for a vehicle of this age and value, warranting closer inspection of damage specifics.
- * Despite Police being contacted, the `police\_report\_available` field is marked 'NO'. This is a significant inconsistency that requires clarification.

2. Comparative Analysis

The current claim aligns closely with similar historical cases identified by the RAG system. All top three similar cases were flagged as 'N' (Normal Claim) for fraud and were subsequently approved. This similarity, coupled with the high confidence of the ML classifier (99.1% 'N'), suggests that, based on historical patterns and learned features, this claim presents characteristics previously deemed non-fraudulent. The insured's profile (long-term customer, professional) likely contributes to this alignment.

3. Anomaly & Fraud Detection

Despite the strong ML prediction and similarity to approved cases, several anomalies require further

investigation:

* **Bodily Injury Discrepancy:** The `bodily\_injuries` field states '0', yet there is an `injury\_claim` of \$500.0. This is a direct contradiction and a significant red flag. Even minor claims usually correspond to at least some reported injury, however slight.

* **Missing Police Report:** The `authorities\_contacted` field indicates 'Police', but `police\_report\_available` is 'NO'. It is highly unusual for police to be contacted for a collision and not generate a report, or for that report not to be available. This discrepancy raises concerns regarding the official documentation of the incident.

* **Claim Amount vs. Severity:** While not an outright anomaly, a \$3500.0 vehicle claim for 'Minor Damage' on a 2018 Toyota Camry is at the upper end of what might be expected. This, combined with the other flags, increases the need for detailed review of damage estimates.

4. Auditing Recommendation

Given the significant discrepancies identified, particularly the contradiction between reported bodily injuries and the injury claim amount, and the absence of a police report despite authorities being contacted, **it is recommended to flag this claim for manual claims investigation.**

While the machine learning model and similar historical claims suggest a normal claim, these specific inconsistencies represent critical warning signs that override the automated assessment. A manual investigation is necessary to:

1. Clarify the nature and justification of the \$500.0 injury claim when 0 bodily injuries are reported.
2. Ascertain why a police report is unavailable despite police contact.
3. Thoroughly review the damage assessment to ensure the vehicle claim amount aligns with 'Minor Damage'.

Decision: Flag for Manual Claims Investigation.
