

ActuaryGPT — Vehicle Claim Auditing Report

Confidential claim fraud analysis & risk recommendation report.

1. Policyholder & Claim Profile

Age / Months as Cust	35 yrs / 100 mos	Policy State / CSL	NY / 250/500
Incident Type	Single Vehicle Collision	Incident Severity	Minor Damage
Collision Type	Side Collision	Incident Date / Hour	N/A / 12:00
Total Claim Amount	\$5,000.00	Vehicle Claim	\$3,500.00
Auto Make & Model	Toyota Camry (2018)	Witnesses / Police Report	2 / NO

2. Claim Fraud Assessment

AI Fraud Classification	Low Risk - Verified Claim
Prediction Confidence	99.1%
Underwriting Recommendation	Approved for Claim Payout

3. AI Claim Analysis & Detail Explanation

Vehicle Claim Auditing Report: VEH-TEST-99

Date: 2026-06-21

Claim ID: VEH-TEST-99

Client: ahan

Policy Holder Age: 35

Months as Customer: 100 (Established Customer)

Auto Make/Model/Year: Toyota Camry, 2018

Total Claim Amount: \$5000.00

1. Incident Risk Assessment

The incident details present several inconsistencies that warrant closer examination:

* **Incident Type & Collision Type:** A "Single Vehicle Collision" with a "Side Collision" type is plausible (e.g., hitting a pole or guardrail).

* **Incident Severity:** Reported as "Minor Damage." While a \$3500 vehicle claim for a 2018 Toyota Camry with minor damage is somewhat high but not entirely out of range, it's worth noting in context.

* **Authorities Contacted vs. Police Report:** The claim states 'Police' were contacted, yet the 'police_report_available' field is marked 'NO'. This is a significant discrepancy. If police responded, a report or incident number should typically be available.

* **Property Damage Inconsistency:** The claim indicates 'property_damage': 'NO', but a 'property_claim' of \$1000.00 is submitted. This is a direct contradiction.

* **Bodily Injuries Inconsistency:** The claim indicates 'bodily_injuries': 0, but an 'injury_claim' of \$500.00 is submitted. This is also a direct contradiction.

* **Witnesses:** The presence of 2 witnesses is a positive indicator, assuming their contact information is available and verifiable.

* **Incident Hour:** Mid-day (12:00) is a common time for incidents and does not present an immediate red flag.

* **Customer Profile:** The insured is an established customer (100 months), a professional with an MD education, which generally suggests a lower fraud risk profile.

2. Comparative Analysis

The Machine Learning Classifier predicted 'N' (Normal Claim) with a high confidence of 99.1%. This prediction is strongly supported by the similar historical claims retrieved:

* **Claim VEH-960680:** Similarity: 97.8%, Fraud Flag: N, Status: approved

* **Claim VEH-464234:** Similarity: 97.3%, Fraud Flag: N, Status: approved

* **Claim VEH-884365:** Similarity: 97.3%, Fraud Flag: N, Status: approved

All highly similar past cases were approved and not flagged for fraud. This suggests that, based on the overall data pattern and features considered by the model, this claim shares characteristics with previously legitimate claims. The ML model, however, may not be specifically designed to catch direct internal contradictions in data.

fields like those identified below.

3. Anomaly & Fraud Detection

Despite the ML model's high confidence for a normal claim and alignment with similar historical cases, critical anomalies and potential red flags are present:

* **Lack of Police Report (Contradiction 1):** The declaration of contacting the police without an available police report is a significant warning sign. This requires clarification to ensure police were indeed involved and to understand why no official report was generated or can be provided.

* **Property Damage Discrepancy (Contradiction 2):** A "NO" for property damage combined with a \$1000 property claim is a direct and undeniable contradiction. This strongly suggests either a data entry error or an attempt to claim for damage that was not reported at the scene.

* **Bodily Injury Discrepancy (Contradiction 3):** Similarly, zero bodily injuries reported while simultaneously submitting a \$500 injury claim is a clear contradiction. This also points to potential data issues or an unjustified claim.

* **Claim Amount for "Minor Damage":** While \$3500 for vehicle damage on a 2018 Camry could be minor, the additional \$1500 in potentially questionable property and injury claims elevates the total to \$5000 for "Minor Damage," which is on the higher end and exacerbates the other inconsistencies.

These internal inconsistencies within the claim application itself are critical and cannot be overlooked, regardless of external validation from the ML model or historical data.

4. Auditing Recommendation

Due to the significant and direct contradictions within the provided claim details, the claim **cannot be approved for payout in its current state.**

Recommendation: **Flag for Manual Claims Investigation.**

The investigation should focus on:

1. **Verification of Police Contact:** Obtain details of police involvement, including incident report numbers or contact person.
2. **Reconciliation of Property Damage Claim:** Clarify the discrepancy between "NO" property damage and the \$1000 property claim. Request documentation for the claimed property damage.
3. **Reconciliation of Bodily Injury Claim:** Clarify the discrepancy between "0" bodily injuries and the \$500 injury claim. Request medical reports or documentation for the claimed injury.
4. **Witness Statements:** Verify the existence and contact information of the two witnesses.

These steps are essential to resolve the internal inconsistencies and validate the legitimacy of the claims before any payout consideration.
