

ActuaryGPT — Vehicle Claim Auditing Report

Confidential claim fraud analysis & risk recommendation report.

1. Policyholder & Claim Profile

Age / Months as Cust	48 yrs / 328 mos	Policy State / CSL	OH / 250/500
Incident Type	Single Vehicle Collision	Incident Severity	Major Damage
Collision Type	Side Collision	Incident Date / Hour	N/A / 5:00
Total Claim Amount	\$71,610.00	Vehicle Claim	\$52,080.00
Auto Make & Model	Saab 92x (2004)	Witnesses / Police Report	2 / YES

2. Claim Fraud Assessment

AI Fraud Classification	High Risk - Potential Fraud Flag
Prediction Confidence	97.4%
Underwriting Recommendation	Refer for Manual Audit Investigation

3. AI Claim Analysis & Detail Explanation

Claim Auditing Report: VEH-894F7F

Date: 2026-06-20

Claim ID: VEH-894F7F

Client: customer1

Status: Pending

1. Incident Risk Assessment

The incident is classified as a 'Single Vehicle Collision' with 'Major Damage' resulting from a 'Side Collision'. Single-vehicle incidents inherently carry a heightened risk of misrepresentation due to the absence of a third-party account. However, this risk is partially mitigated by the presence of two reported witnesses and confirmation that authorities were contacted, with a police report available.

The incident occurred at 5 AM, an hour often associated with lower visibility, increased driver fatigue, or reduced public presence, which can sometimes be a factor in suspicious claims. While the policy is based in 'OH', the incident occurred in 'SC', which is common but noted. The claim includes one 'bodily_injury' and 'property_damage', contributing to the overall complexity and value of the claim.

2. Comparative Analysis

The RAG context indicates "No similar cases found." This suggests that the claim's profile, or a combination of its features, is unique within the historical dataset. While this does not directly indicate fraud, it means there are no historical benchmarks for direct comparison, necessitating a more thorough evaluation based on internal risk indicators and anomalies. The absence of similar cases could potentially point to a novel or evolving fraud pattern.

3. Anomaly & Fraud Detection

Several significant anomalies and potential fraud indicators have been identified:

* **Vehicle Claim Amount Discrepancy:** The most critical red flag is the 'vehicle_claim' amount of \$52,080.00 for a 2004 Saab 92x. The Actual Cash Value (ACV) of a vehicle of this make, model, and year, even in excellent condition or as a total loss, would typically be significantly lower than this figure. This disparity strongly suggests potential overvaluation, inflated repair estimates, or claims for pre-existing/unrelated damage.

* **High Total Claim Amount:** The 'total_claim_amount' of \$71,610.00 is substantial, primarily driven by the highly questionable vehicle claim component, exacerbating concerns about its legitimacy.

* **Incident Hour:** The 5 AM incident time, while not definitive, is noted as an hour that might be exploited for staged incidents or to minimize external observation.

* **Financial Indicators:** The insured reported a 'capital_loss' of -\$46,000.00. While 'capital_gains' were

higher, significant capital losses can indicate financial distress, which is a known motivational factor for insurance fraud.

* **Machine Learning Classifier Output:** The claim has been flagged by the ML model as 'Potential Fraud' ('Y') with a very high confidence level of 97.4%. This strong algorithmic signal indicates that the claim's combined characteristics align with patterns previously identified as fraudulent.

* **Insured Occupation/Education Mismatch:** While not a direct fraud indicator, the insured's reported education level ('MD') and occupation ('craft-repair') present an unusual combination which might warrant a minor note for verification during an investigation.

4. Auditing Recommendation

Given the critical and glaring anomaly of the extraordinarily high vehicle claim amount for a 2004 Saab 92x, reinforced by the strong fraud prediction from the machine learning classifier, this claim necessitates an immediate and comprehensive manual investigation.

Recommendation: **Flag for Manual Claims Investigation.**

The investigation should prioritize the following actions:

1. **Independent Vehicle Valuation:** Obtain a professional, independent valuation of the 2004 Saab 92x (Actual Cash Value) immediately prior to the incident. Scrutinize all repair estimates and invoices to justify the \$52,080.00 vehicle claim.
2. **Police Report Acquisition & Review:** Independently secure and meticulously review the official police report from the SC authorities to verify incident details, damage descriptions, and any recorded statements.
3. **Witness Interview & Corroboration:** Contact and obtain independent statements from both reported witnesses to corroborate their accounts of the incident and ascertain any relationship they may have with the insured.
4. **Damage Appraisal:** Arrange for an independent damage appraisal by a qualified expert to verify the extent, nature, and causality of all claimed vehicle and property damages, ensuring consistency with a 'Side Collision' and 'Major Damage'.
5. **Bodily Injury Claim Review:** Conduct a thorough review of all medical documentation and invoices pertaining to the \$6,510.00 injury claim for reasonableness and direct causality to the incident.

Payout approval for VEH-894F7F must be formally paused pending the satisfactory completion of this comprehensive manual investigation.
