

ActuaryGPT — Vehicle Claim Auditing Report

Confidential claim fraud analysis & risk recommendation report.

1. Policyholder & Claim Profile

Age / Months as Cust	48 yrs / 328 mos	Policy State / CSL	OH / 250/500
Incident Type	Single Vehicle Collision	Incident Severity	Major Damage
Collision Type	Side Collision	Incident Date / Hour	N/A / 5:00
Total Claim Amount	\$71,610.00	Vehicle Claim	\$52,080.00
Auto Make & Model	Saab 92x (2004)	Witnesses / Police Report	2 / YES

2. Claim Fraud Assessment

AI Fraud Classification	High Risk - Potential Fraud Flag
Prediction Confidence	97.4%
Underwriting Recommendation	Refer for Manual Audit Investigation

3. AI Claim Analysis & Detail Explanation

Claim Auditing Report: VEH-894F7F

Date: 2026-06-20

Claim ID: VEH-894F7F

Client: customer1

Status: Pending

1. Incident Risk Assessment

The incident involves a 'Single Vehicle Collision' with 'Major Damage' reported as a 'Side Collision'. While the 'authorities_contacted' field indicates 'Police' and a 'police_report_available' is confirmed, which are positive mitigating factors, single-vehicle incidents inherently carry a higher risk of misrepresentation due to the absence of a third-party account. The incident occurred at '5' AM, an hour often associated with lower visibility, fatigue, or reduced public presence, though two witnesses are reported. The incident took place in 'SC' while the policy is registered in 'OH', which is common but noted. 'Bodily_injuries' to one person and 'property_damage' are also reported, contributing to the overall claim complexity and value.

2. Comparative Analysis

The provided RAG context indicates "No similar cases found." Therefore, a direct comparative analysis with historical claims cannot be performed. This claim will be evaluated based on its individual characteristics and known fraud indicators, as the absence of similar cases could suggest a unique claim profile or a potential emerging fraud pattern not yet documented within the system.

3. Anomaly & Fraud Detection

Several potential warning signs and anomalies have been identified:

* **Vehicle Claim Amount vs. Vehicle Age/Make:** The most significant red flag is the 'vehicle_claim' amount of \$52,080.00 for a 2004 Saab 92x. The Actual Cash Value (ACV) of a 2004 Saab 92x, even in excellent condition or as a total loss, would typically be considerably lower than this amount. This disparity strongly suggests potential overvaluation of the vehicle, inflated repair estimates, or claims for pre-existing or unrelated damage.

* **High Total Claim Amount:** The 'total_claim_amount' of \$71,610.00 is substantial, driven primarily by the high vehicle claim component, which further amplifies the concern regarding the vehicle's market value.

* **Single Vehicle Collision with High Claim:** While two witnesses and a police report are present, a high-value single-vehicle collision still warrants closer scrutiny, particularly when combined with other red flags.

* **Incident Hour:** The incident occurring at 5 AM, while not an outright red flag, can be a contributing factor in scenarios where an individual might attempt to stage an incident or minimize observation by others.

* **Financial Indicators:** The 'capital_loss' of -\$46,000.00, despite overall capital gains, indicates significant recent financial activity that might be explored in a broader investigation, although it is not a direct fraud

indicator on its own.

* **Machine Learning Classifier Output:** The ML model has predicted 'Potential Fraud' ('Y') with a high confidence level of 97.4%. This strong algorithmic signal indicates that the claim's combined features align with patterns previously identified as fraudulent.

4. Auditing Recommendation

Given the critical anomaly of the extraordinarily high vehicle claim amount for a 2004 Saab 92x, coupled with the high-confidence fraud prediction from the machine learning classifier, this claim requires immediate and thorough manual investigation.

Recommendation: **Flag for Manual Claims Investigation.**

The investigation should prioritize:

1. **Vehicle Valuation:** Obtain a comprehensive valuation report for the 2004 Saab 92x (Actual Cash Value) immediately prior to the incident and scrutinize the detailed breakdown of the \$52,080.00 vehicle claim to ascertain its legitimacy.
2. **Police Report Verification:** Independently obtain and review the official police report for the incident in SC to corroborate all reported details, including the time, location, damage description, and any statements made at the scene.
3. **Witness Corroboration:** Contact and obtain independent statements from both reported witnesses to verify their accounts of the incident and their relationship, if any, to the insured.
4. **Damage Assessment:** Arrange for an independent damage appraisal to verify the extent and cause of damages reported for the vehicle and property, ensuring they are consistent with the claimed 'Side Collision' and 'Major Damage'.
5. **Bodily Injury Claim Review:** Review the medical documentation and invoices related to the \$6,510.00 injury claim for reasonableness and causality.

Payout approval should be formally paused pending the satisfactory completion of this comprehensive investigation.
