

ActuaryGPT — Vehicle Claim Auditing Report

Confidential claim fraud analysis & risk recommendation report.

1. Policyholder & Claim Profile

Age / Months as Cust	48 yrs / 328 mos	Policy State / CSL	OH / 250/500
Incident Type	Single Vehicle Collision	Incident Severity	Major Damage
Collision Type	Side Collision	Incident Date / Hour	N/A / 5:00
Total Claim Amount	\$9,500.00	Vehicle Claim	\$52,080.00
Auto Make & Model	Saab 92x (2004)	Witnesses / Police Report	2 / YES

2. Claim Fraud Assessment

AI Fraud Classification	High Risk - Potential Fraud Flag
Prediction Confidence	97.4%
Underwriting Recommendation	Refer for Manual Audit Investigation

3. AI Claim Analysis & Detail Explanation

Claim Auditing Report: VEH-894F7F

Date: 2026-06-20

Claim ID: VEH-894F7F

Client: customer1

Status: Pending

1. Incident Risk Assessment

The incident is reported as a 'Single Vehicle Collision' with 'Major Damage' resulting from a 'Side Collision'. Single-vehicle incidents carry an inherent heightened risk of misrepresentation or staging due to the absence of a third-party account. However, this risk is partially mitigated by the report of two witnesses and the confirmation that authorities were contacted, with a police report stated as available.

The incident occurred at 5 AM, an hour often associated with lower visibility, increased driver fatigue, or reduced public presence. The incident took place in 'SC' while the policy is based in 'OH', which is common but noted. The claim includes one reported 'bodily_injury' and 'property_damage', contributing to the overall complexity and value of the claim.

2. Comparative Analysis

The RAG context indicates "No similar cases found." This suggests that the claim's specific profile, or a combination of its features, does not closely match any historical claims within the current dataset. While this observation does not directly indicate fraud, it means there are no immediate historical benchmarks for direct comparison. This necessitates a more thorough evaluation based on internal risk indicators and anomalies, as the absence of similar cases could potentially point to a novel or evolving fraud pattern.

3. Anomaly & Fraud Detection

Several significant anomalies and potential fraud indicators have been identified, warranting immediate attention:

* **Extraordinary Vehicle Claim Amount:** The most critical red flag is the 'vehicle_claim' amount of \$52,080.00 for a 2004 Saab 92x. The Actual Cash Value (ACV) for a vehicle of this make, model, and year, even in excellent condition or as a total loss, would typically be significantly lower than this figure. This substantial disparity strongly suggests potential overvaluation, inflated repair estimates, or claims for pre-existing/unrelated damage.

* **High Total Claim Amount:** The 'total_claim_amount' of \$71,610.00 is exceptionally high, primarily driven by the highly questionable vehicle claim component, which significantly escalates concerns regarding its legitimacy.

* **Incident Hour:** The 5 AM incident time, while not definitive, is noted as an hour that could be exploited for staged incidents or to minimize external observation.

* **Financial Indicators:** The insured reported a 'capital_loss' of -\$46,000.00. While 'capital_gains' were also reported, significant capital losses can indicate financial distress, which is a known motivational factor for insurance fraud.

* **Machine Learning Classifier Output:** The claim has been flagged by the ML model as 'Potential Fraud' ('Y') with a very high confidence level of 97.4%. This strong algorithmic signal indicates that the claim's combined characteristics align with patterns previously identified as fraudulent.

* **Insured Occupation/Education Mismatch:** The insured's reported education level ('MD') and occupation ('craft-repair') present an unusual combination which, while not a direct fraud indicator, may warrant minor verification during an investigation.

4. Auditing Recommendation

Given the critical and glaring anomaly of the extraordinarily high vehicle claim amount for a 2004 Saab 92x, reinforced by the strong fraud prediction from the machine learning classifier, this claim necessitates an immediate and comprehensive manual investigation.

****Recommendation:** Flag for Manual Claims Investigation.****

The investigation should prioritize the following actions:

1. ****Independent Vehicle Valuation:**** Immediately obtain a professional, independent valuation of the 2004 Saab 92x (Actual Cash Value) from a period immediately prior to the incident. Scrutinize all repair estimates and invoices to rigorously justify the \$52,080.00 vehicle claim amount.
2. ****Police Report Acquisition & Review:**** Independently secure and meticulously review the official police report from the SC authorities to verify incident details, damage descriptions, and any recorded statements or observations.
3. ****Witness Interview & Corroboration:**** Contact and obtain independent statements from both reported witnesses to corroborate their accounts of the incident and ascertain any relationship they may have with the insured.
4. ****Damage Appraisal:**** Arrange for an independent damage appraisal by a qualified expert to verify the extent, nature, and causality of all claimed vehicle and property damages, ensuring consistency with a 'Side Collision' and 'Major Damage'.
5. ****Bodily Injury Claim Review:**** Conduct a thorough review of all medical documentation and invoices pertaining to the \$6,510.00 injury claim for reasonableness and direct causality to the reported incident.

****Payout approval for VEH-894F7F must be formally paused pending the satisfactory completion of this comprehensive manual investigation.****
